BONOMI IDROSANITARIA WAS FOUNDED IN BONOMI FAMILY, WHO LAUNCHED A FOUNDRY

1908 THANKS TO AN INTUITION OF THE FOR MANUFACTURING BRASS ITEMS.

The company traces its history back to the beginning of last century: we are in **1908**, Lumezzane, when it comes to life the family business of foundry and workshop for machining brass items.

The technical local tradition and the family dedication to the undertaken activities have led, generation after generation, to the creation of a company increasingly specialized in design, manufacture and marketing of components for plumbing systems, civil and industrial ones, which distribute, control and intercept fluid and gas fuels.

YESTERDAY^{1.}

TRAINING IS DUE NOT ONLY TO COMMERCIAL AND CREATION OF AN ESTEEM BOND.

DEVELOPMENT, BUT ALSO TO THE ENHANCEMENT

TODAY².

Idrosanitaria Bonomi can now be appreciated as one of the top level manufacturers in the plumbing sector, thanks to a human and technological heritage of great value.

Essential factors for the company are undoubtedly innovation and human resources. The complexity of market rules, the continuous transformation of products and inquiries have led Idrosanitaria Bonomi to believe it is necessary to constantly promote and carry out training courses, also to implement new production and management technologies to support its employees.

Training is due not only to commercial development, but also to the enhancement and creation of an esteem bond.

Idrosanitaria Bonomi is also making increasingly close collaborations with several universities, specialised in Technical Engineering and Academies of Fine Arts.

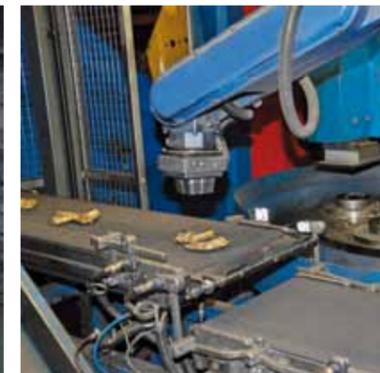

At the base of the evolution of a craft, there can only be technology. To support its Technical Department, Idrosanitaria Bonomi avails itself of R&D Consortium **RUVARIS**, of which it has been a partner and an integral part for a long time.

CONSORZIO RUVARIS

IT AIMS TO DEVELOP RESEARCH COLLABORATIONS WITH LEADING ITALIAN UNIVERSITIES FOR THE STUDY OF INNOVATIVE TECHNOLOGIES AND FOR THE DESIGN OF ALTERNATIVE AND AVANT-GARDE MATERIALS.

THE MAIN POINTS OF INTEREST OF THE CONSORTIUM ARE: COMPLIANCE WITH INTERNATIONAL STANDARDS OF WATER QUALITY FOR HUMAN CONSUMPTION, THE STUDY AND DEVELOPMENT OF ALTERNATIVE RAW MATERIALS AND SURFACE TREATMENTS, THE SEARCH FOR SOLUTIONS TO INTEGRATE HOME AUTOMATION IN CIVIL TAPS.

CURRENTLY THE CONSORTIUM RUVARIS INCLUDES 21 COMPANIES ACROSS THE SANITARY FAUCETS AND VALVES SECTORS.

WE ARE MADE THIS WAY

Currently, approximately 90 employees are committed to production and administrative departments.

The production cycle is carried out in two separate plants, that globally cover an **area of 25,000 square meters**, of which 15,000 are covered.

Daily production capacity is of 50,000 pieces, which are stocked in our warehouses.

In 2010 the new production headquarter in **Sarezzo** has been completed, it has therefore been possible to bring together most of the production departments with the consequent rationalization of the production flow and logistics. At the same time, it has been objectively possible to protect and sustain the physical integrity of employees, achieved through the modernization and substantial improvement of the workplace.

IDROSANITARIA BONOMI IS PRESENT IN EUROPEAN
ITS TURNOVER COMES FROM EXPORT SALES.

In **Muscoline** plant, it has been set up a fully automated division to assemble fittings.

Idrosanitaria Bonomi is one of the few companies in which all production processes take place inside the company:

the design, based on sophisticated CAD systems the production, carried out through:

- ▶ A modern department of forging brass
- ▶ A department with advanced machining centers CNC transfer, completely managed by robots

- ▶ A brass bar manufacturing department with multi-spindle automatic lathes
- ▶ A department of assembly and test
- ▶ A galvanic nickel-chrome plating department, for the surface treatment of the products.

The production cycle is completely managed by **integrated and computerized systems**, such as the checks during the manufacturing processes.

THERE IS SOMETHING FOR EVERYONE

Idrosanitaria Bonomi manufacturing processes for the plumbing industry sector consists of three main product lines, covering comprehensively the components used for the installation of modern and sophisticated air conditioning and heating systems, such as ball valves for water and gas, valves and manifolds for heating elements and multilayer pipe fittings.

The brand Bonomi Contemporaneo Italiano rather sharply places itself as the ideal partner for the high-tech sanitary chrome faucets, where design has a crucial role not only visually but also emotionally.

AND EXTRA EUROPEAN MARKETS, ABOUT 70% OF

ON THE ROAD

Idrosanitaria Bonomi is present in European and Extra European markets, about 70% of its turnover comes from export sales.

...RESPECTING THE ENVIRONMENT

Idrosanitaria Bonomi strongly believes in the commitment to environmental protection and defense of health and safety at work.

It is no longer a choice between manufacturing one way or another, it is a moral and ethical obligation.

THE COMPANY'S ROOTS AND TO REACH OUT FOR THE FUTURE,

It is for this reason that we give great attention to the work environment, ensuring sustainable and responsible use of energy resources used to minimize the impact on the environment outside the company.

TO TRUST IS GOOD

The **DIN EN ISO 9001** has been obtained by the company with the approval of one of the most qualified certification bodies in the European context: the German **TUV**.

The result obtained in 1994, it is the certification of an internal system that provides a rigorous control of production phases, coordinated by the **Quality Manager** throughout the whole evolution of the orders.

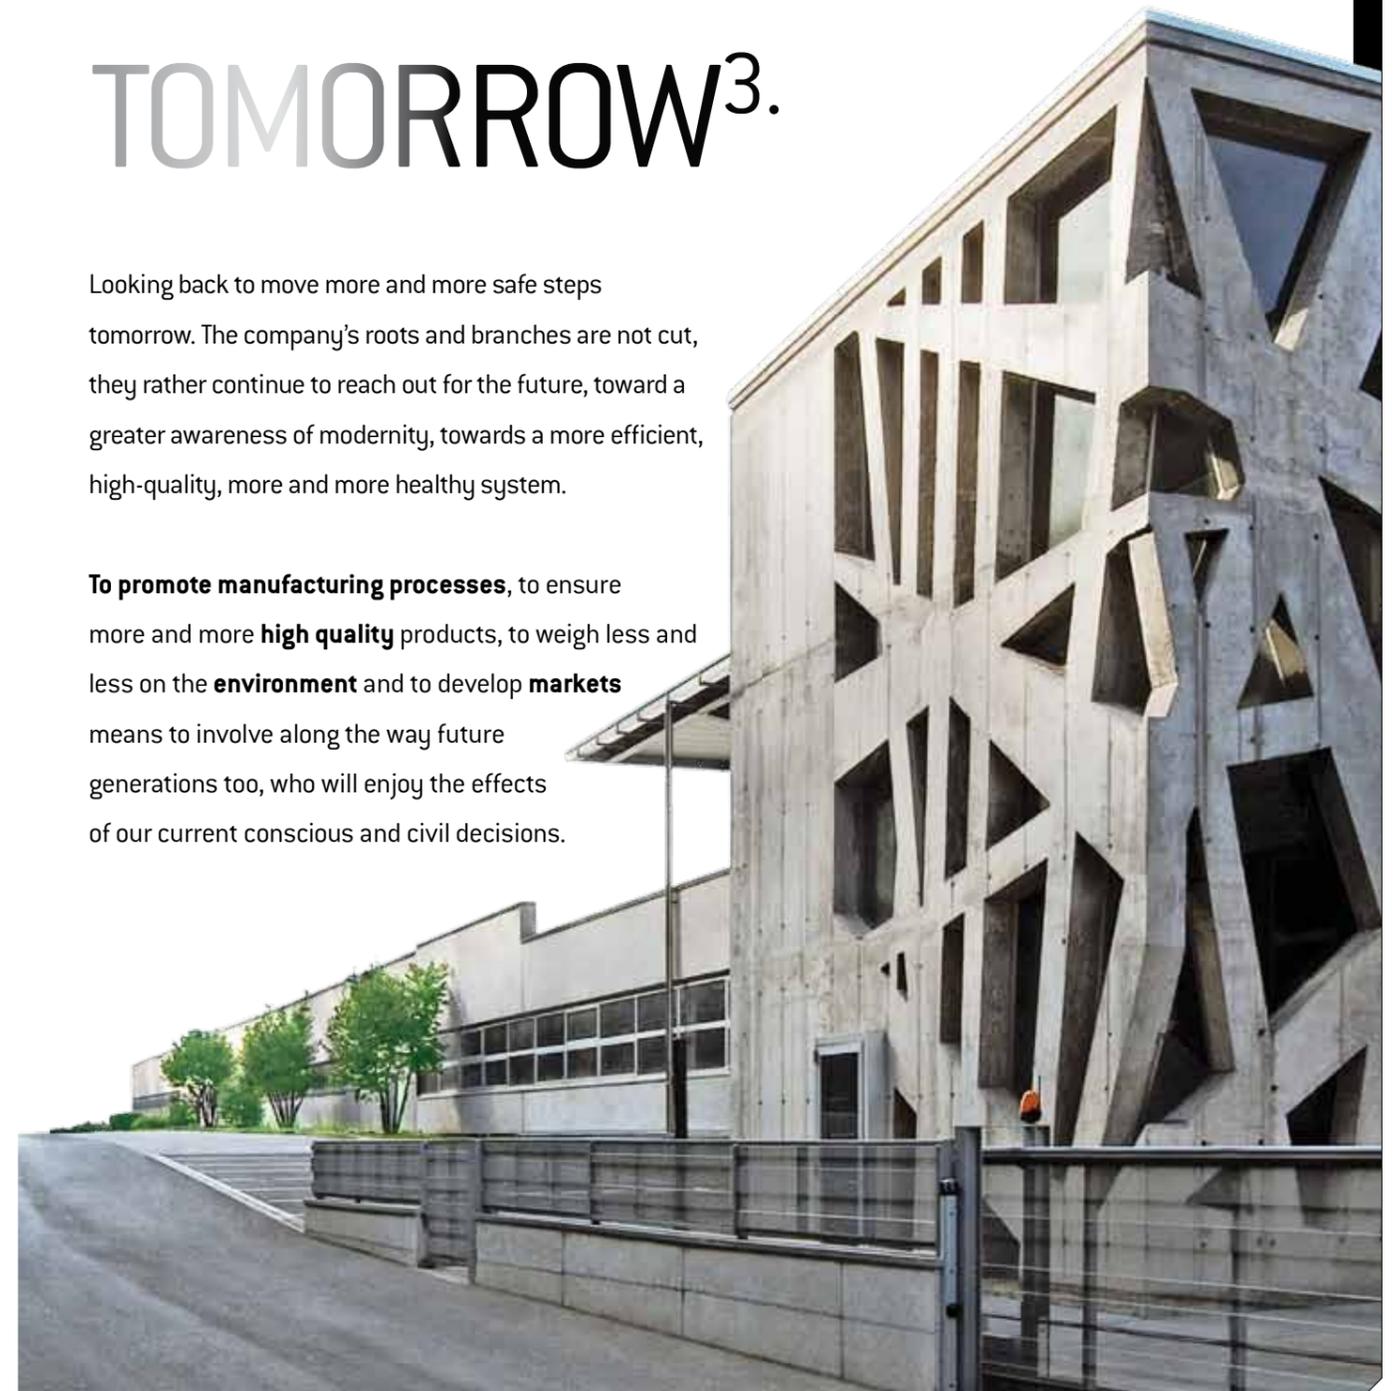

BRANCHES ARE NOT CUT, THEY RATHER CONTINUE TOWARD A GREATER AWARENESS OF MODERNITY

TOMORROW³.

Looking back to move more and more safe steps tomorrow. The company's roots and branches are not cut, they rather continue to reach out for the future, toward a greater awareness of modernity, towards a more efficient, high-quality, more and more healthy system.

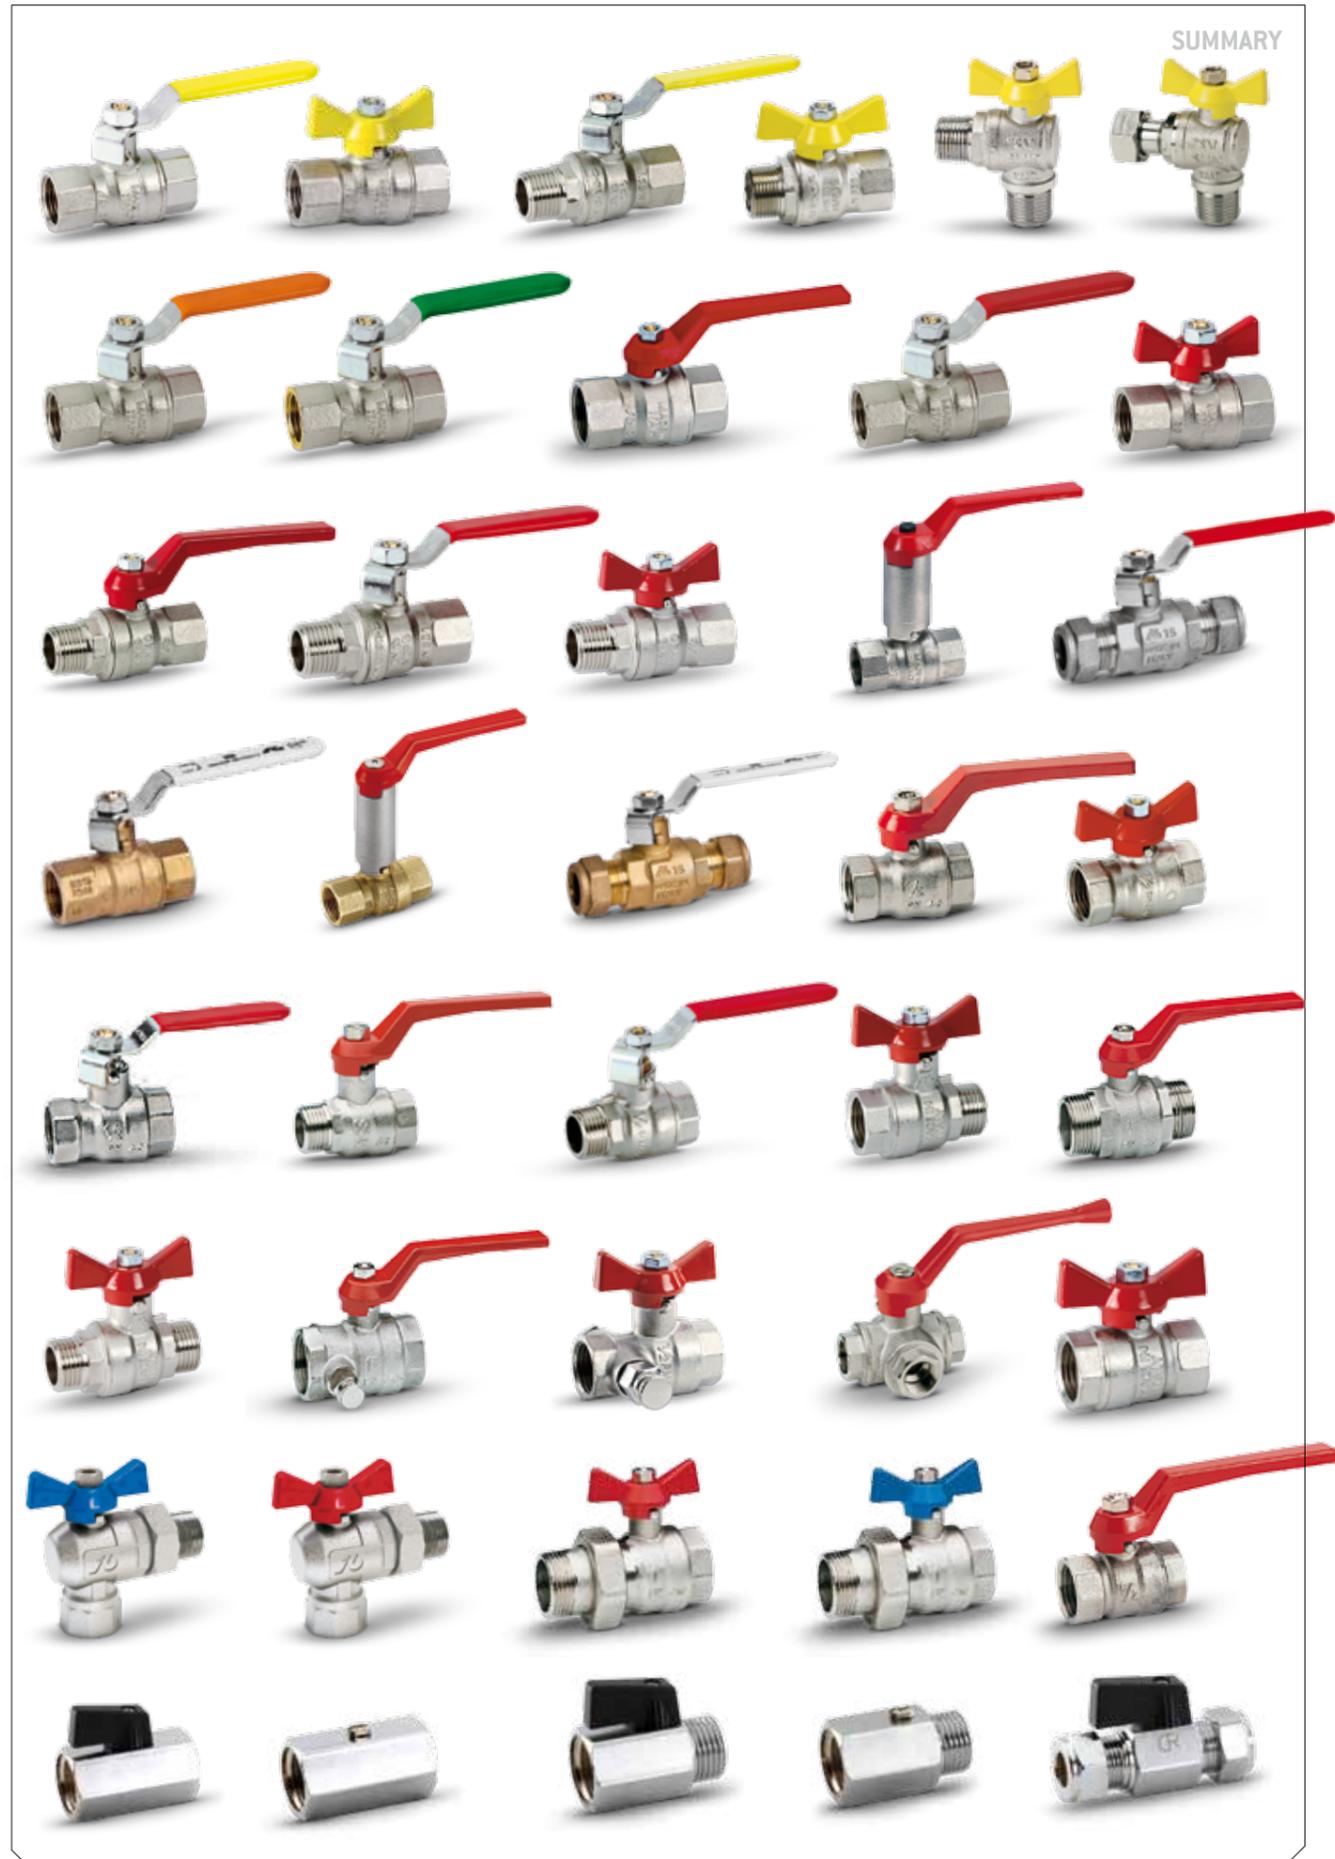

To promote manufacturing processes, to ensure more and more **high quality** products, to weigh less and less on the **environment** and to develop **markets** means to involve along the way future generations too, who will enjoy the effects of our current conscious and civil decisions.

GAS BALL VALVES

NG-4312BP0178

- F/F gas ball valve with iron lever
- Female thread: EN10226-1 (ex ISO7/1)
- Pressure class: MOP 5
- Temperature range: -20°C to +60°C

This valve is particularly indicated for distributing and shutting off low pressure gas. It is manufactured and certified according to EN331 standards, class MOP5.

Other excellent fields of application are in plant engineering for plumbing and heating, and industry. It is a full-bore valve, and ball seal is provided by two PTFE seats.

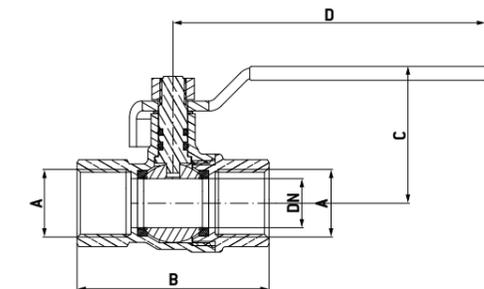

Seal of the stem is provided by two Viton O-rings with the stem mounted from inside and a bottom-loaded system.

COMPONENTS:

IDROSOLAR

BALL VALVES FOR SOLAR PLANTS

- F/F ball valve for solar plants
- Thread: EN10226-1 (ex ISO7/1)
- Temperature range: -10°C to +200°C

This valve is particularly indicated for distributing and shutting off generally non-corrosive fluids at high temperatures that are compatible with the valve materials.

Excellent fields of application are in plant engineering for solar.

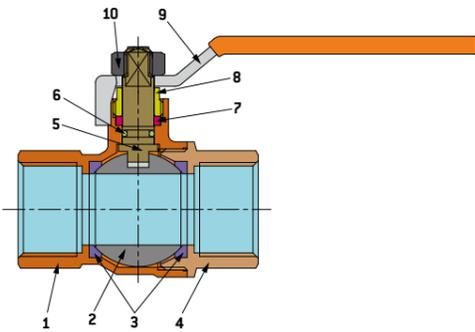

It is a full-bore valve, and ball seal is provided by two special PTFE seats.

Seal of the stem is provided by a special stuff ring and one O-ring with special compound for high temperature and adjustable gland with stem mounted from inside with a bottom-loaded system.

It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

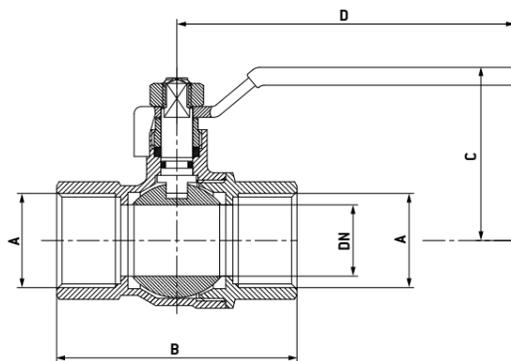

COMPONENTS:

IDROGREEN

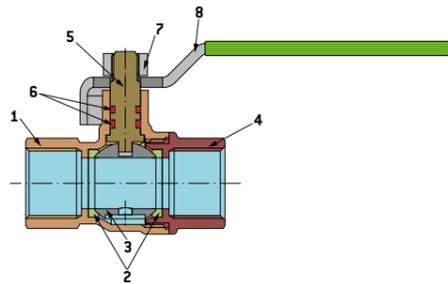

WATER BALL VALVES

AVAILABLE ON DEMAND

- F/F ecological ball valve
- Thread: EN10226-1 (ex ISO 7/1)
- Temperature range: 0°C to +95°C

This valve is particularly indicated for distributing and shutting off of water for human consumption, manufactured in accordance with standard EN 13828. Excellent field of application is in plant engineering for plumbing. It is a full-bore valve, and ball seal is provided by two PTFE seats. The special ball avoid the stagnation of water and the eventual proliferation of dangerous bacteria. Seal of the stem is provided by two EPDM Perox O-rings with the stem mounted from inside and a bottom-loaded system. It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

WATER BALL VALVES

- DZR F/F water ball valve with iron lever
- Thread: ISO 228
- Temperature range: -10°C to +120°C

This valve is particularly indicated for distributing and shutting off fluids that can cause dezincification problems. Excellent fields of application are in plant engineering for plumbing and heating, and industry. It is a full-bore valve, and ball seal is provided by two PTFE seats. Adjustable stem packing is provided by one EPDM Perox o-ring and a PTFE packing gland.

The stem is mounted from inside with a bottom-loaded system. It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

COMPONENTS:

WATER BALL VALVES

- M/F angle ball valve with connector and red "T" handle
- Thread: ISO 228
- Temperature range: - 10° C to + 95° C

The valve is particularly indicated for distributing and shutting off generally non-corrosive fluids which are compatible with the valve materials. Excellent fields of application are in plant engineering for plumbing and heating, industry and agriculture. It is full-bore valve, and ball seal is provided by two PTFE seats. Seal of the stem is provided by two NBR O-rings with the stem mounted from inside and a bottom-loaded system. It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

COMPONENTS:

NIAGARA

WATER BALL VALVES

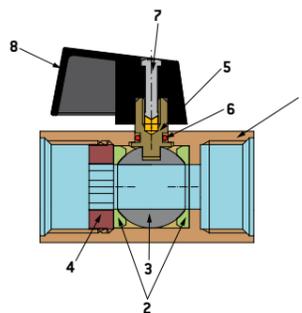

- F/F Mini-ball with lever
- Thread: ISO 228
- Nominal pressure: max 10 bar
- Temperature range: -10°C to +90°C

This valve is particularly indicated for distributing and shutting off generally non-corrosive fluids that are compatible with the valve materials. Excellent fields of application are in plant engineering for plumbing, heating, pneumatic and industry, when it is necessary to have a shut-off element with reduced dimensions.

It is a reduced-bore valve, and ball seal is provided by two PTFE seats. Seal of the stem is provided by an NBR O-ring with the stem mounted from inside and a bottom-loaded system.

It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

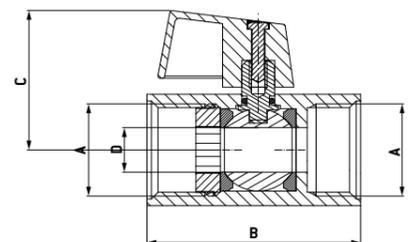

COMPONENTS:

| POSN. | PART NAME | No. Pcs. | MATERIAL |
|-------|---------------------|----------|-----------------------------------|

MINI-BALL DZR

WATER BALL VALVES

- M/F mini-ball - DZR with lever
- Thread: ISO 228
- Nominal pressure: max 10 bar
- Temperature range: -10°C to +90°C

This valve is particularly indicated for distributing and shutting off fluids that can cause dezincification problems.

Excellent fields of application are in plant engineering for plumbing, heating, pneumatic and industry, when it is necessary to have a shut-off element with reduced dimensions.

It is a reduced-bore valve, and ball seal is provided by two PTFE seats.

Seal of the stem is provided by an NBR O-ring with the stem mounted from inside and a bottom-loaded system.

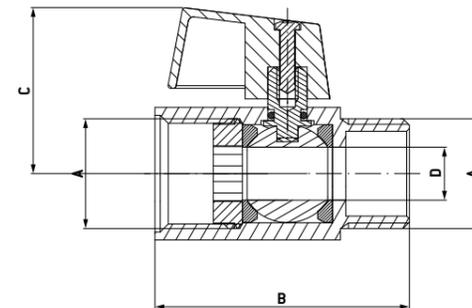

It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

BALL VALVE INSTALLATION, USAGE AND MAINTENANCE INSTRUCTIONS

1. Introduction

The ball valve is an organ for fluids' interception made up by:

- **Body or casting:** it constitutes the external part of the valve; internally it has two shaped connections to link the valve to the piping system;
- **Ball:** it is the actual organ of interception; the sealing is obtained through the compression of two gaskets, made of a deformable material, against the ball itself;
- **Spindle:** it is the existent link between the ball and the valve manoeuvring part;
- **Manoeuvring part:** it is the system through which the valve is manoeuvred; this system, most commonly a lever, can be on demand supplied in different shapes;
- **Connections:** these can be male or female threaded, with soldering or compression ends.

2. Assembling

Idrosanitaria Bonomi valves are bidirectional, they allow flows from both directions and in any position.

The valve must be installed, having the ball on the opened position, when the system is not working and after having checked that piping are not under pressure and at room temperature.

System fixing is set through the valve body threaded connections. The two threaded connections are produced according to international regulations, thereby matching fittings and pipes need to be made by the same regulations too. In order to facilitate connections' sealing, on the pipes' thread, some appropriate sealing products can be used (ex: Teflon tape, hemp, etc.).

Sealing products use must be limited to the threaded area, the excess can interfere with the closing of ball-gasket, jeopardizing the seal and generating tension on the valve.

During assembling it is suggested to tighten up the piping by blocking the valve with an appropriate spanner in the hexagonal/octagonal base, placed on the external part on the same thread where the pipe is connected. It is besides suggested not to exceed in the tightening action in order not to create tensions on the valve. Make sure that pipes are correctly aligned. Upstream and downstream pipes need to be appropriately connected to the valve in order not to generate tensions on the valve, during and after assembling.

After assembling, a system accurate wash with **open valve** is advisable, allowing remains removal, without the latter damaging the ball or the gaskets.

For a proper use it is advised to open/close the valve slowly, avoiding water hammers from occurring. It is besides advisable to use proper pressure limit control devices to help reducing water hammers' occurrence.

It is suggested to place an impurities collector filter upstream to the valve.

3. Usage

The fluid going through the valve needs to be compatible with the valve construction materials.

Pressure and temperature conditions are also defined in provided technical specifications.

We highly recommend valve usage on completely open or closed position (not on partial opening/closing and not closed for a long time), as to avoid seal damages.

The ball valve opens by rotating the handle of 90° anticlockwise and closes by rotating the handle by 90° clockwise.

The handle direction indicates whether the valve is open or closed. If the handle is aligned with the valve, the same is open, whilst when perpendicular it is closed.

4. Disassembling

When disassembling the valve from the system/piping it is highly recommended to:

- Wear appropriate coveralls according to the fluid contained in the system;
- Depressurize the system and operate as follows:
 - Place the valve in the open position and empty the system
 - Manoeuvre the valve to unload pressure;
- Apply the spanner to the end of the closest valve to the pipe. Once the valve is disassembled it is not suggested to reuse it.

5. Maintenance

Usually, ball valves are not required any kind of maintenance; however, a periodical check is suggested in order to ensure its correct functioning.

If the valve is working under extreme conditions, it is recommended to check it more frequently.

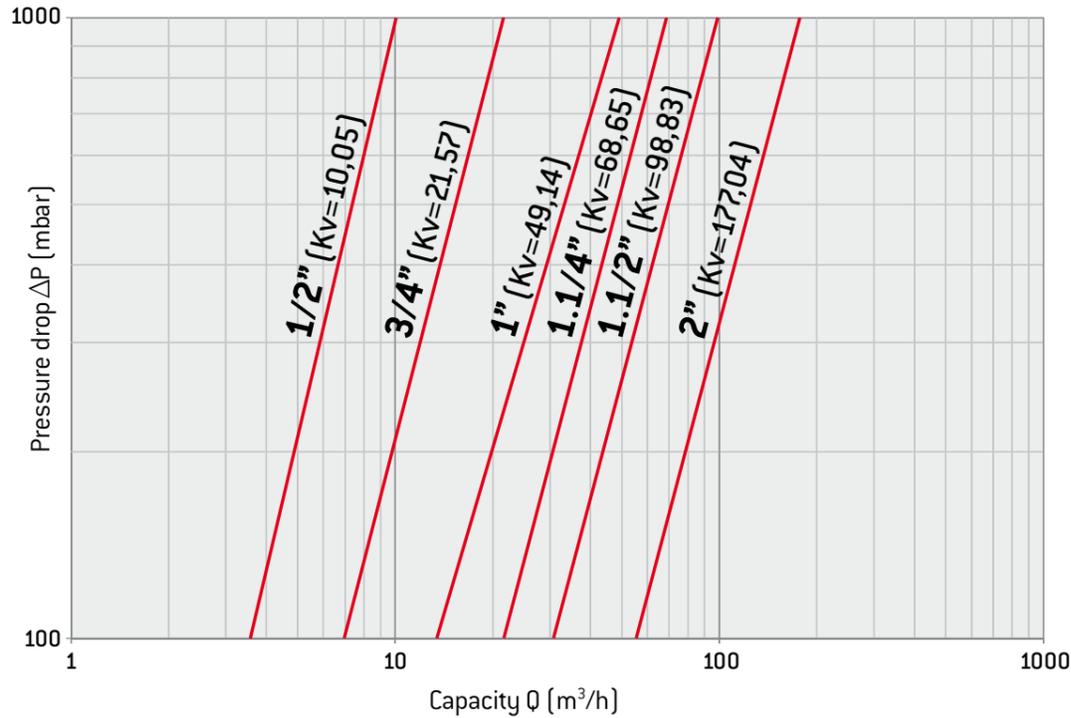

It is suggested to carry out a complete manoeuvre cycle once every 3 months to prevent scale from forming and preventing the valve from properly functioning.

7951...

PRESSURE DROP CHART

VALID ALSO FOR 7953 - 7954 - 7960 - 7964
795101 - 795702 - 795701 - 7957 - 1300 - 1305

It is defined Kv the flow in m³/h of water at temperature of 15,5°C that causes a pressure drop of 1 bar: bigger is its value, less are the pressure drops.

PRESSURE/TEMPERATURE CHART

VALID ALSO FOR 7964 - 7966 - 7611

The diagram pressure temperature represents the limit of valve's application, the graphics have to be considered approximate, since the variables which occur during the utilization of the same (manouvre cycles, periodical or sudden alterations of pressure and temperature, fluid used).

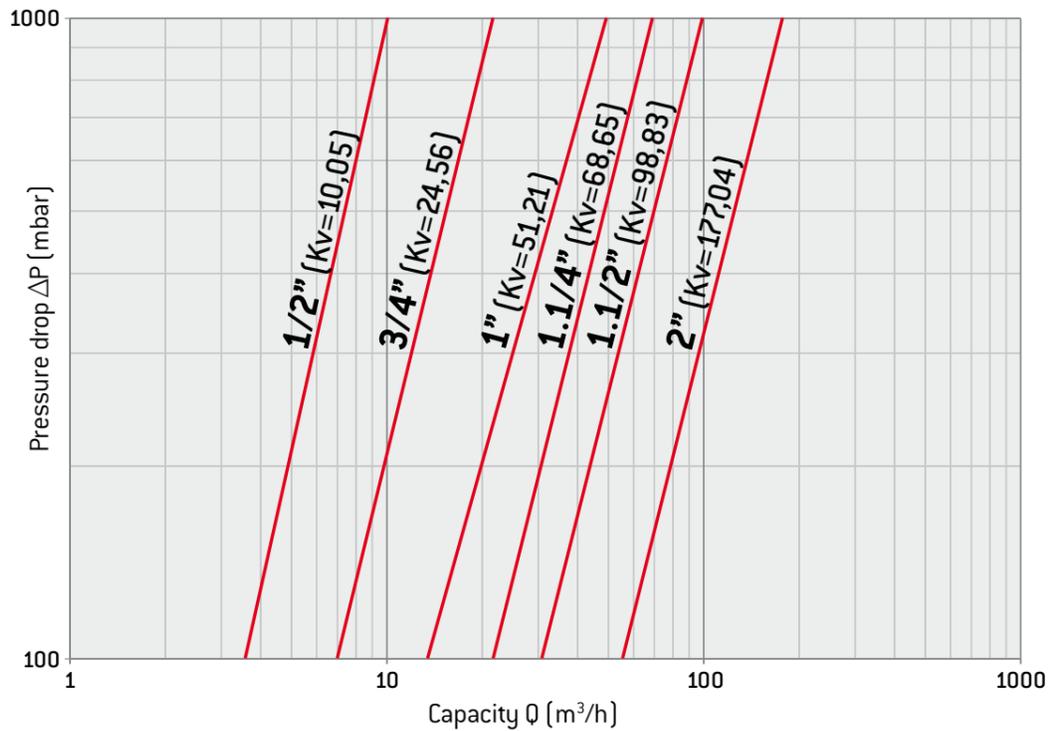

7600...

PRESSURE DROP CHART

VALID ALSO FOR 7602 - 7611 - 7615 - 7617 - 7605
760501 - 7607 - 7608 - 7645 - 7647

It is defined Kv the flow in m³/h of water at temperature of 15,5°C that causes a pressure drop of 1 bar: bigger is its value, less are the pressure drops.

ANGLE-SEAT VALVE

STOP VALVES

- F/F angle-seat valve with fixed stem
- EN10226-1 (ex ISO 7/1) female thread
- Temperature range: 0°C to +95°C

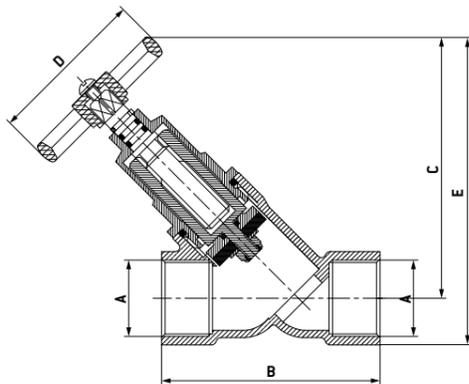

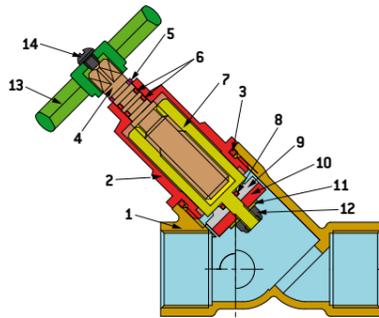

This valve is particularly indicated for distributing, regulating and shutting off generally non-corrosive fluids that are compatible with the valve materials. Other excellent fields of application are in plant engineering for plumbing and heating, and industry.

The valve is made in accordance with German standards DIN 3502 and 3546 PART II.

Seat seal is provided by a KTW-approved NBR gasket.

STOP VALVE

STOP VALVES

- F/F stop valve with drain cock
- Female thread: ISO 228 (1/2" - 3/4" - 1")
- Female thread: EN10226-1 (ex ISO 7/1) 1.1/4" - 1.1/2" - 2"
- Temperature range: 0°C to +95°C

This valve is particularly indicated for distributing, regulating and shutting off generally non-corrosive fluids that are compatible with the valve materials. Another excellent field of application is in plant engineering for plumbing and heating. Seat seal is provided by an NBR gasket.

LOIRA WITH STRAINER

CHECK VALVES

- Loira check valve with strainer
- Female thread: ISO 228
- Strainer with hole of 1200 micron
- Temperature range: 0°C to +90°C

This valve is particularly indicated for use in suction lift pumps for the non-return of generally non-corrosive fluids that are compatible with the valve materials.

Excellent fields of application are in plant engineering for plumbing and heating, industry, agriculture and pneumatics.

The direction of flow is indicated by an arrow on the valve body. It can be installed in any position.

Seat seal is provided by a NBR gasket.

COMPONENTS:

BOILER DRAIN VALVE

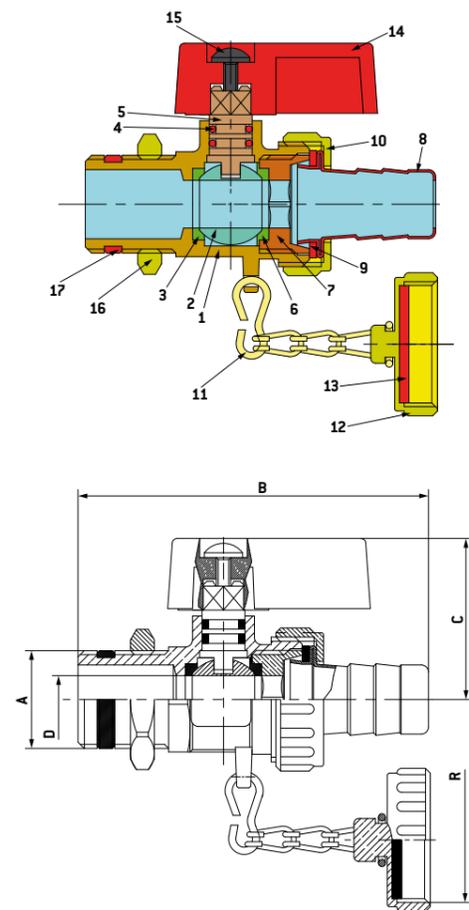

BOILER DRAIN VALVES

- Boiler drain valve
- 1/2" ball drain valve with lever
- Thread: ISO 228
- Temperature range: 0°C to +90°C

This valve is particularly indicated for shutting off generally non-corrosive fluids that are compatible with the valve materials. An excellent field of application is in plant engineering for plumbing and heating, especially as a means for discharging the heat carrier in the heating plant.

It is a reduced-bore valve and ball seal is provided by two PTFE seats. Seal of the manoeuvring part is provided by two NBR O-rings with the stem mounted from inside and a bottom-loaded system. It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

COMPONENTS:

BUILT-IN BALL VALVE

BUILT-IN TAPS

- Built-in ball valve with knob and cap
- Extractable stem and ball
- Female/Female thread: ISO 228
- Temperature range: 0°C to +95°C

This valve is particularly indicated for distributing and shutting off generally non-corrosive fluids that are compatible with the valve materials. An excellent field of application is in plant engineering for plumbing and heating, where it is used as a shut-off valve for built-in installation. It is a full-bore valve. Ball seal is provided by two PTFE seats, both of which can be removed together with the ball for maintenance purposes. Seal of the manoeuvring part is provided by two NBR O-rings. It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

COMPONENTS:

| POSN. | PART NAME | No. Pcs. | MATERIAL |

BIBCOCK

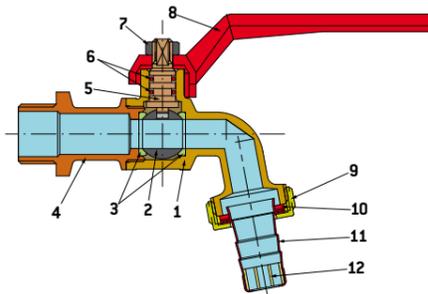

- Bibcock with aluminium lever and hose-end
- Thread: ISO 228
- Finish: sandblasted and nickel plated
- Temperature range: 0°C to +95°C

This tap is particularly indicated for distributing and shutting off generally non-corrosive fluids that are compatible with the valve materials. Excellent fields of application are plant engineering for plumbing and heating, industry and agriculture.

It is a reduced-bore tap and ball seal is provided by two PTFE seats.

Seal of the manoeuvring part is provided by two NBR O-rings with the stem mounted from inside and a bottom-loaded system.

It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

BIBCOCK WITH HOSE-END

BIBCOCK

- Bibcock with hose-end
- Thread: ISO 228
- Finishes available: sandblasted and chromed code 371211
- polished code 371212
- polished and chromed code 371213
- Temperature range: 0°C to +90°C

This tap is particularly indicated for distributing and shutting off generally non-corrosive fluids that are compatible with the valve materials. Excellent fields of application are plant engineering for plumbing and heating, industry, agriculture and private construction. Seat seal is provided by a NBR gasket.

Under-basin tap

- Under-basin tap
- Male thread: ISO 228
- Temperature range: 0-80°C

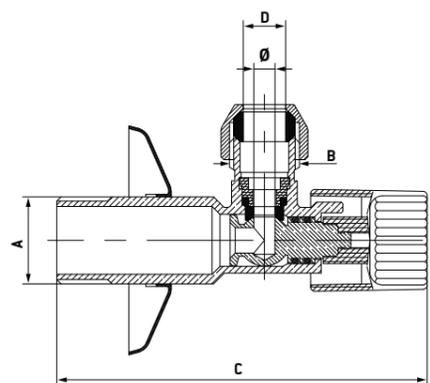

This tap is particularly indicated for distributing, regulating and shutting off generally non-corrosive fluids that are compatible with the valve materials. An excellent field of application is in plant engineering for plumbing and heating, where it is generally used as a shut-off valve installed before taps, mixers or flushing cisterns. Seat seal is provided by a NBR gasket.

WASHING MACHINE BALL VALVE

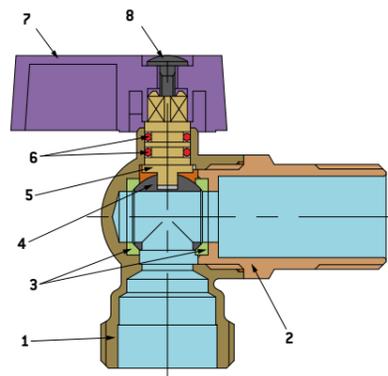

WASHING MACHINE TAP

- Washing machine ball valve
- Male thread: ISO 228
- Temperature range: 0-80°C

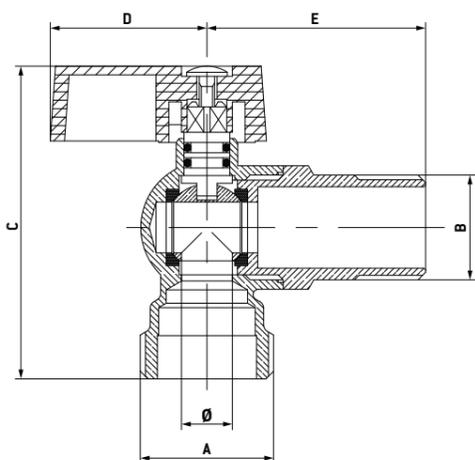

This tap is particularly indicated for distributing and shutting off generally non-corrosive fluids that are compatible with the valve materials. An excellent field of application is in plant engineering for plumbing and heating, where it is generally used as a shut-off tap installed before washing machines or dishwashers.

It is a reduced-bore valve and ball seal is provided by two PTFE seats. Seal of the manoeuvring part is provided by two NBR O-rings with the stem mounted from the inside and a bottom-loaded system. It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

PRESSURE REDUCER

PRESSURE REDUCERS

- Heavy-duty pressure reducer with stainless steel seat and F/F unions
- Maximum operating pressure: 25 bar
- Temperature range: 0-80°C

This reducer is particularly indicated for regulating the downstream pressure of fluids when medium-high flow rates are required. Excellent fields of application are in plant engineering for plumbing and heating, industry and agriculture. Seal of the AISI 304 steel seat is provided by an NBR gasket.

The pressure reducer is factory set at an output pressure of 3 bar.

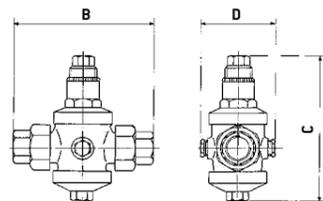

Field of outlet regulation:

from 1/2" to 1" → 0,5 - 5 bar

from 1.1/4" to 2" → 1 - 5,5 bar

SAFETY VALVE

PRESSURE REDUCERS

- Water heater safety valve with lever

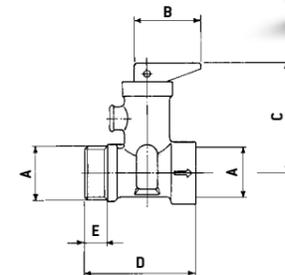

This valve is particularly indicated for regulating the pressure inside a water heater. When the pressure exceeds the maximum setting, the relief valve opens to prevent the pressure inside the water heater from rising to a dangerous level.

Operate the lever periodically (preferably once a month) to check operation of the valve or empty the appliance if necessary.

The valve is factory set at an output opening pressure of 8,5 bar.

SAFETY VALVE

PRESSURE REDUCERS

- F/F 1/2" boiler safety valve, 6 bar
- Maximum operating pressure: **6 BAR**
- Temperature range: 5-110°C

Safety valves are particularly indicated for regulating pressure in heat generators installed in heating systems and hot-water storage tanks in plumbing and heating systems.

When the pressure exceeds the maximum setting (marked in relief on the plastic cap), the relief valve opens to prevent the pressure inside the system from rising to a dangerous level for the generator and the components of the system.

Seat seal is provided by an EPDM Perox diaphragm, which is guaranteed non-stick and inalterable even when subjected to prolonged use.

BRONZE VALVES

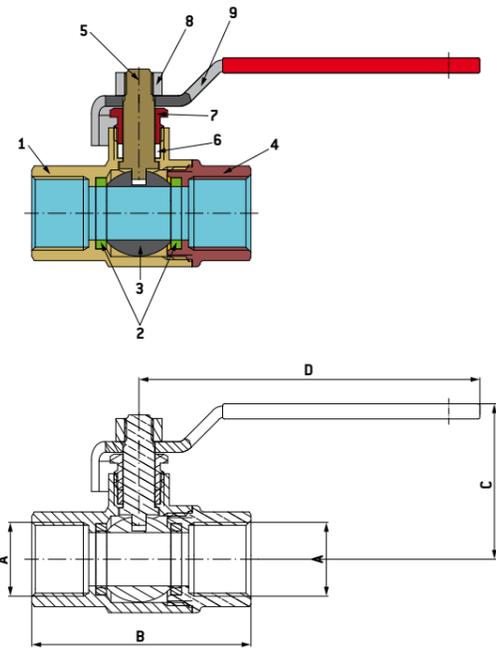

SUMMARY

1300...

RENO

WATER BALL VALVES

- F/F bronze ball valve with iron lever
- Thread: ISO 228, on request EN10226-1 [ex ISO 7/1] - NPT
- Temperature range: -10°C to +120°C / min. 14°F to max. +248°F

This valve is particularly indicated for distributing and shutting off fluids that can cause dezincification problems. It is also suitable for use in marine and other aggressive environments. Other excellent fields of application are in plant engineering for plumbing and heating, industry and shipbuilding. It is a full-bore valve, and ball seal is provided by two PTFE seats. Seal of the stem is provided by a PTFE ring and an adjustable gland with the stem mounted from inside and a bottom-loaded system. It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

RENO

WATER BALL VALVES

- Bronze solder ball valve with iron lever
- Temperature range: -10°C to +120°C / min. +14°F to max +248°F

This valve is particularly indicated for distributing and shutting off fluids that can cause dezincification problems. It is also suitable for use in marine and other aggressive environments. Other excellent fields of application are in plant engineering for plumbing and heating, industry and shipbuilding. It is a full-bore valve, and ball seal is provided by two PTFE seats. Seal of the stem is provided by a PTFE ring and an adjustable gland with the stem mounted from inside and a bottom-loaded system. It is advisable to perform a complete manoeuvring cycle at least once every 3 months to prevent the formation of limescale, which would affect operation.

BRONZE ANGLE-SEAT VALVE

STOP VALVES

- F/F bronze angle-seat valve with drain cock
- Female thread: ISO 228
- Temperature range:
Water: -10°C to +100°C with drain cock closed
Saturated steam: max +150°C with drain cock closed

This valve is particularly indicated for distributing, regulating and shutting off fluids that can cause dezincification problems. It is also suitable for use in marine and other aggressive environments. Other excellent fields of application are in plant engineering for plumbing and heating, industry and shipbuilding.
Seat seal is provided by a PTFE gasket.

BRONZE GLOBE VALVE WITH PTFE SEAT

GLOBE VALVE

- Globe valve with PTFE seat
- Thread: ISO 228 and NPT on request
- Nominal pressure max PN16
- Water temperature range: 0°C to +100°C / min. +32°F to max +212°F
- Saturated steam temperature: max. 170°C / max. +338°F

This valve is particularly indicated for distributing, regulating and shutting off air, steam or fluids that can cause dezincification problems. It is also suitable for use in marine and other aggressive environments.

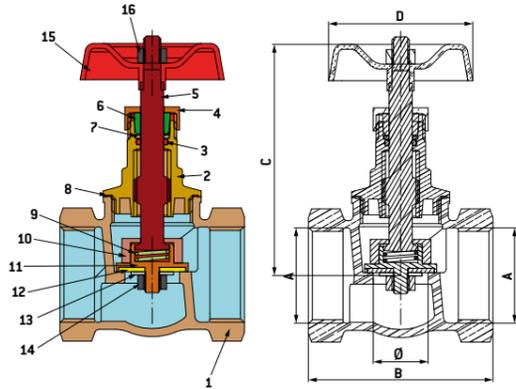

Other excellent fields of application are in plant engineering for plumbing and heating, industry and shipbuilding.

Seat seal is provided by a PTFE gasket.

BRONZE SWING CHECK VALVE RUBBER SEAT

SWING CHECK VALVES

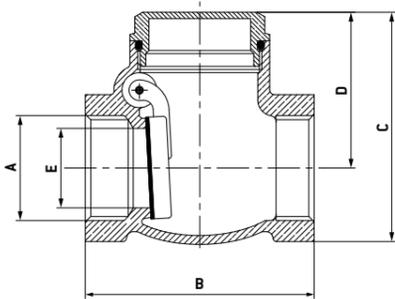

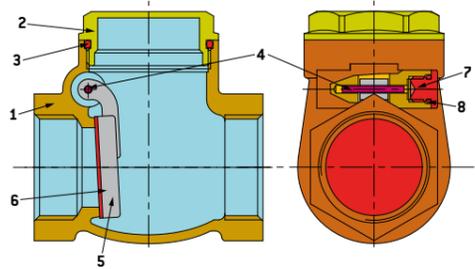

- Bronze swing check valve rubber seat
- Female/Female thread: ISO 228
- NPT Female/Female thread on request
- Temperature range: 0°C to +95°C / min. +32°F to max. +203°F

This valve is particularly indicated for the non-return of fluids that can cause dezincification problems. It is also suitable for use in marine and other aggressive environments.

Other excellent fields of application are in plant engineering for plumbing and heating, industry and shipbuilding.

The direction of flow is indicated by an arrow on the valve body. It can be installed either horizontally or vertically.

Seat seal is provided by a NBR gasket.

BRONZE SWING CHECK VALVE METAL SEAT

SWING CHECK VALVES

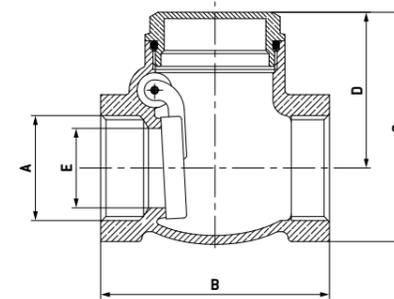

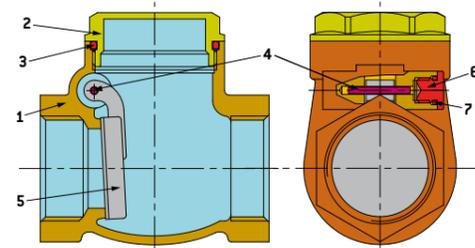

- Bronze swing check valve metal seat
- Female/Female thread: ISO 228
- NPT Female/Female thread on request
- Temperature range: 0°C to +95°C / min. +32°F to max. +203°F

This valve is particularly indicated for the non-return of fluids that can cause dezincification problems. It is also suitable for use in marine and other aggressive environments.

Other excellent fields of application are in plant engineering for plumbing and heating, industry and shipbuilding.

The direction of flow is indicated by an arrow on the valve body. It can be installed either horizontally or vertically.

Seat seal is provided by a metal-on-metal coupling.

BRONZE HORIZONTAL VALVE RUBBER SEAT

CHECK VALVES

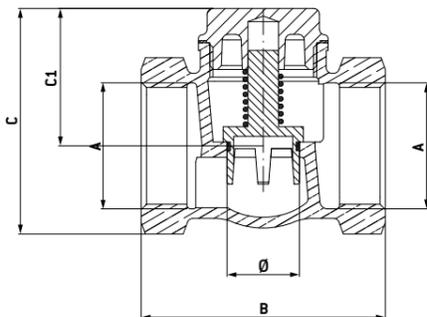

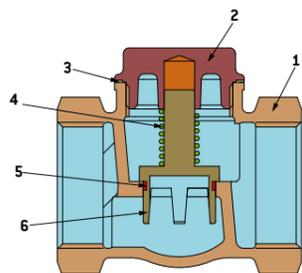

- Horizontal valve rubber seat
- Thread: ISO 228 and request NPT
- Temperature range: -10°C to +100°C / min. +14°F to max. +212°F

This valve is particularly indicated for the non-return of fluids that can cause dezincification problems. It is also suitable for use in marine and other aggressive environments.

Other excellent fields of application are in plant engineering for plumbing and heating, industry and shipbuilding.

The direction of flow is indicated by an arrow on the valve body. It must be installed horizontally.

Seat seal is provided by a EPDM gasket.

BRONZE GATE VALVE

GATE VALVES

- Bronze gate valve
- Thread: ISO 228
- Temperature range: 0°C to +80°C / min. +32°F to max. +176°F

This valve is particularly indicated for distributing, regulating and shutting off air, steam or fluids that can cause dezincification problems. It is also suitable for use in marine and other aggressive environments. Other excellent fields of application are in plant engineering for plumbing and heating, industry and shipbuilding. Seat seal is provided by a metal-on-metal coupling.

PRE-ASSEMBLED MANIFOLD

MANIFOLD

- Pre-assembled manifold from bar
- Finish: Nickel
- Threads: ISO 228
- Temperature range: min. 0 °C - Max 95 °C

The manifold is particularly suitable for the distribution, interception and regulation of heat transfer fluids. The pre-assembled manifold is composed of flow meters and flow regulators for balancing of circuits and interception valves arranged for the electric actuator.

Both manifolds are provided by terminals of automatic vent and valves for loading / unloading facility.

The temperature control in each room allows a proper management of thermal loads of the project, while conserving energy, greatly improving the environmental well-being.

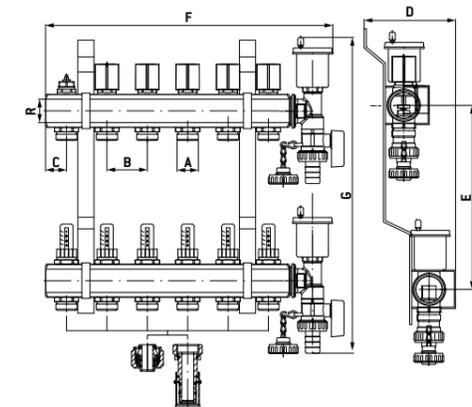

NOTE: The manifold terminal (7) are supplied disassembled in separate packages.

COMPONENTS:

37290001

ELECTROTHERMAL ACTUATOR 4 WIRE

MANIFOLD

- Linear motion
- Normally closed
- Head run: 4 mm
- Power supply: 230VAC/DC
- Power consumption: 2.5 W
- Degree of protection: IP 54 can be installed in any position
- Power Cord: type H05V2V2-F
- Final stage of opening or closing: 3 minutes
- Temperature range: min. 0 °C - Max 95 °C
- Viewer Location: red - black
- Housing material: self-extinguishing V0
- Attack valve: brass ring M30x1, 5

Electrothermic heads allow the opening / closing in automatic of the collectors' valves.

The command of the head is done through a thermostat positioned in each room that, according to the request, opens or closes the circuit of heating / cooling.

The version has 4 wires, blue - brown - black for AUX - gray for AUX with cable length of 1mt and auxiliary contact of end run for the circulators command and the zone valves.

MANIFOLD WITH VALVE

MANIFOLDS

- Manifold with valves and PEX-AL-PEX adaptors
- Finish: nickel-plated
- Available also with blue handle
- Thread: ISO 228
- Temperature range: 0°C to 95°C

This manifold is particularly indicated for distributing and shutting off fluids for sanitary and heating systems. Other excellent fields of application are in plant engineering for plumbing and heating and industry. Seat seal is provided by an EPDM Perox gasket, which is ideal for use with water and glycol solutions max 50%.

COMPONENTS:

VALVES AND LOCKSHIELDS FOR RADIATORS

SUMMARY

5609...

RADIATOR VALVE

RADIATOR VALVES

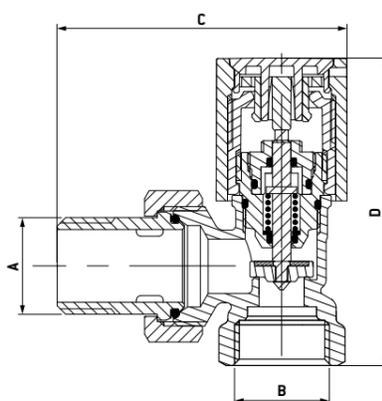

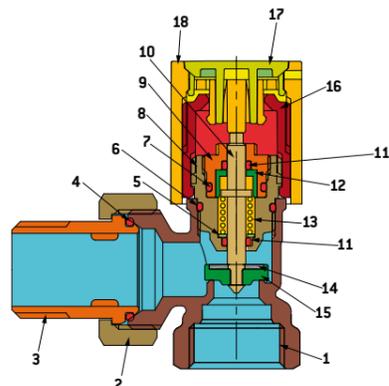

- Female angle thermostatic valve, with connection for iron pipes for use with a 5603 lockshield valve
- Maximum nominal pressure: 10 bar
- Temperature range: 0-95°C

This valve is particularly indicated for distributing, regulating and shutting off heat carriers. The field of application is in plant engineering in residential heating systems. When a thermostatic head is applied to the valve, it can be used to automatically set and maintain ambient temperature. Seat seal is provided by an EPDM Perox gasket, which is ideal for use with water and glycol solutions max 50%.

RADIATOR VALVE

RADIATOR VALVES

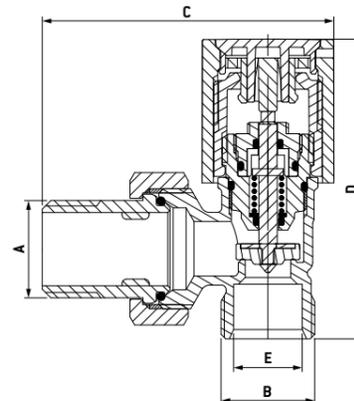

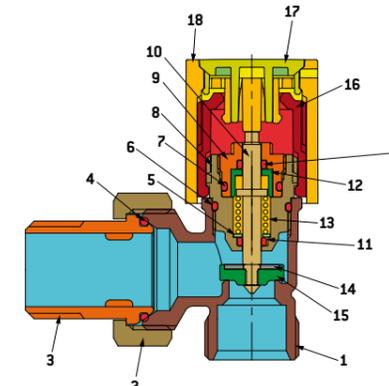

- Male angle thermostatic radiator valve, with interchangeable connection for copper, plastic and multi-layer pipes
- For use with lockshield valve code 5607
- Maximum nominal pressure: 10 bar
- Temperature range: 0-95°C

This valve is particularly indicated for distributing, regulating and shutting off heat carriers. The field of application is in plant engineering in residential heating systems. When a thermostatic head is applied to the valve, it can be used to automatically set and maintain ambient temperature. Seat seal is provided by an EPDM Perox gasket, which is ideal for use with water and glycol solutions max 50%.

RADIATOR VALVE

RADIATOR VALVES

- Female angle thermostatic radiator valve connector with PTFE seal and connection for iron pipe
- For use with lockshield valve code 5603E
- Maximum nominal pressure: 10 bar
- Temperature range: 0-95° C

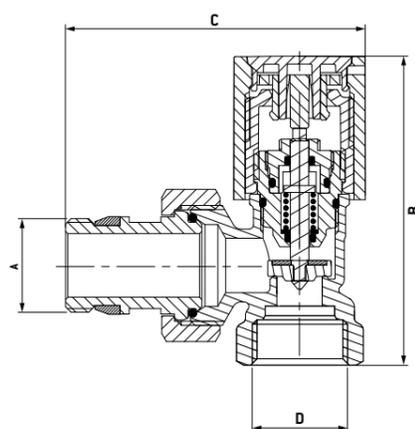

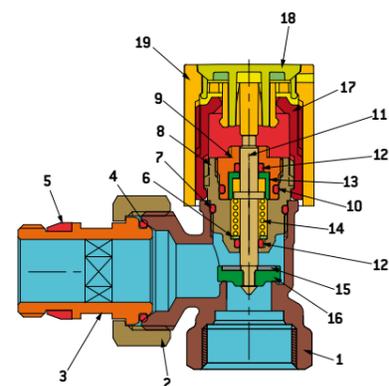

The valve is particularly indicated for distributing, regulating and shutting off heat carriers.

The field of application is in plant engineering in residential heating systems. The valve thanks to the applicable thermostatic head, allows the regulation and automatic maintenance of ambient temperature.

Seat seal is provided by an EPDM Perox O-Ring, which is ideal for use with water and glycol solutions max 50%.

Temperature's Limitations

1. Set the thermostatic control to position 6MAX;
2. Move the external shell from the thermostatic control side till to cover the position's writing;
3. Turn clockwise till to have the position 0;
4. Move the thermostatic control to the desired maximum temperature's position;
5. Press the external shell lengthwise the axis of the thermostatic head into direction of the metallic ring;
6. At this point you can turn the thermostatic head only to the lower position;
7. To eliminate the limitation press the shell into direction of the thermostatic control. Repeat points 1 and E. The thermostatic head, to work correctly, has to be used only with the valves produced by Idrosanitaria Bonomi S.p.A., for those it has been calibrated.

RADIATOR VALVE

RADIATOR VALVES

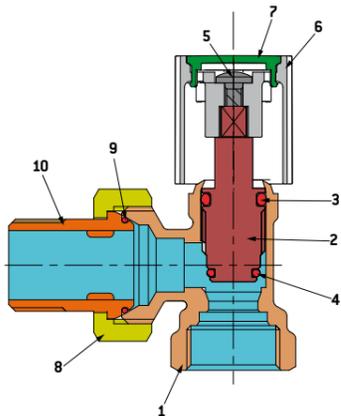

- Female angle radiator valve with connection for iron pipes
- For use with lockshield valve code 5603
- Maximum nominal pressure: 10 bar
- Temperature range: 0-95°C

This valve is particularly indicated for distributing, regulating and shutting off heat carriers.

The field of application is in plant engineering in residential heating systems. The valve is used to regulate ambient temperature by manually modifying the rate of flow.

Seat seal is provided by an EPDM Perox O-ring, which is ideal for use with water and glycol solutions max 50%.

Pre-sealed PTFE connectors are available for certain models.

LOCKSHIELD VALVE

RADIATOR VALVES

- Female angle lockshield valve with connection for iron pipes
- Maximum nominal pressure: 10 bar
- Temperature range: 0-95°C

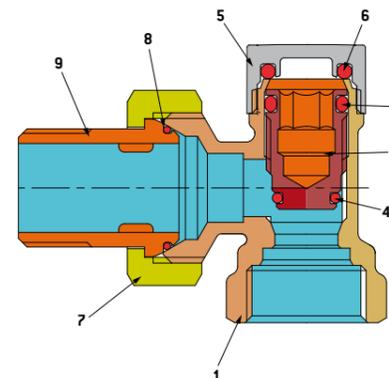

This valve is particularly indicated for distributing, regulating and shutting off heat carriers.

The field of application is in plant engineering in residential heating systems. The valve allows thermal balancing of heating elements by micro-metrically modifying the fluid outflow rate.

Seat seal is provided by an EPDM Perox O-ring, which is ideal for use with water and glycol solutions max 50%.

RADIATOR VALVE

RADIATOR VALVES

- Female angle radiator valve, connector with PTFE seal and connection for iron pipe
- For use with lockshield valve code 5603E
- Maximum nominal pressure: 10 bar
- Temperature range: 0-95°C

This valve is particularly indicated for distributing, regulating and shutting off heat carriers.

The field of application is in plant engineering in residential heating systems. The valve is used to regulate ambient temperature by manually modifying the rate of flow.

Seat seal is provided by an EPDM Perox O-ring, which is ideal for use with water and glycol solutions max 50%.

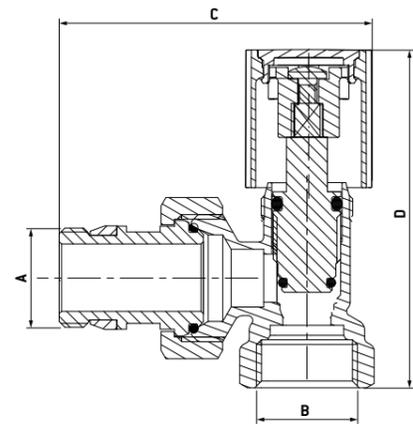

Pre-sealed PTFE connectors are available for certain models.

LOCKSHIELD VALVE

RADIATOR VALVES

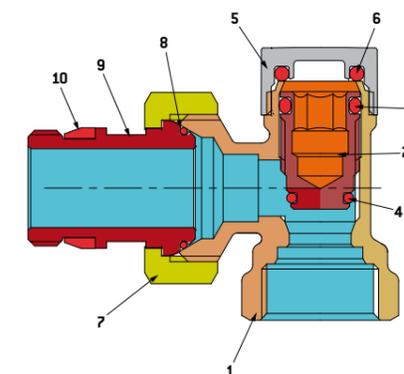

- Female angle lockshield valve, connector and PTFE seal, with connection for iron pipes
- Maximum nominal pressure: 10 bar
- Temperature range: 0-95°C

This valve is particularly indicated for distributing, regulating and shutting off heat carriers.

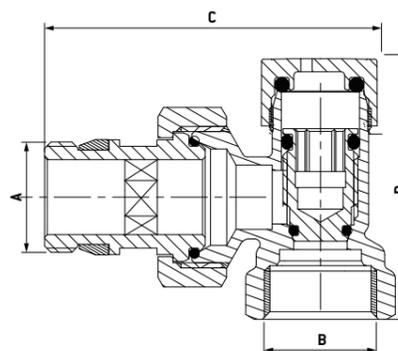

The field of application is in plant engineering in residential heating systems. The valve allows thermal balancing of heating elements by micro-metrically modifying the fluid outflow rate.

Seat seal is provided by an EPDM Perox O-ring, which is ideal for use with water and glycol solutions max 50%.

PEX-AL-PEX PIPE

PEX-AL-PEX PIPES

This multi-layer pipe is a valid alternative to the plastic and metal pipes currently in use.

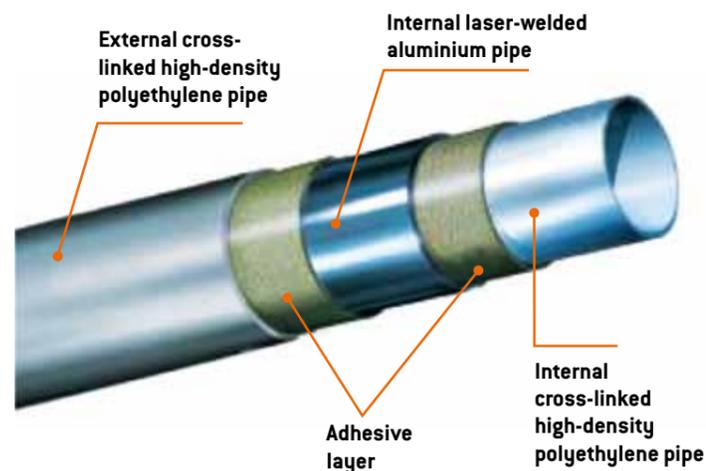

The main advantages are:

- Easy installation as it is lightweight and has no elastic memory as a result of the internal aluminium layer.
- A very high standard of hygiene, so it can be used to convey drinking water in accordance with Ministry of Health regulations.
- Corrosion resistance due to cross-linked polyethylene layers and the use of fittings with dielectric barriers that protect the product against chemical, electromagnetic and natural corrosion, thus preventing the so-called "pile effect".
- Reduced load losses. The internal polyethylene lining guarantees considerable reduction in the load losses that normally occur with metal piping. The absence of limescale and incrustation ensures a constant flow through time.
- Impermeability to oxygen. The aluminium layer creates a barrier to gases that could trigger corrosion in the circuits and the formation of moulds and bacteria.
- Reduced thermal expansion. The multi-layer pipe reduces thermal expansion of the plastic materials due to the internal aluminium layer and maintains their properties, such as reduced load losses, a high standard of hygiene and ease of installation, as it is easy to bend and maintains the desired curvature even at low temperatures.
- Pre-insulated multi-layer pipes are available with specific sheathing for special applications (heating, plumbing, air conditioning).

PEX-AL-PEX PIPE WITH GIRDLE

PEX-AL-PEX PIPES

IDROPRESS - PRESSING SYSTEM FOR CONNECTORS FROM Ø 16 mm to Ø 32 mm

The pressing system for connectors from Ø 16 to Ø 32 is done through the utilization of a tong TH model, that misshapes the bush in stainless steel AISI 304 solubilized determining the locking of the pipe to the connector.

The system pipe/fitting in diameters 16 - 20 - 26 is approved by:

IDROPRESS - PRESSING SYSTEM FOR CONNECTORS FROM Ø 40 mm to Ø 63 mm

The pressing system for connectors from Ø 40 to Ø 63 is done through the utilization of a tong TH model, that misshapes the steel bush determining the locking of the pipe to the connector.

The system is composed by a plastic ring and AISI 304 stainless steel solubilized bush.

▶ The measures marked with this symbol use this kind of pressing system

MOUNTING INSTRUCTIONS IDROPRESS CONNECTORS FROM Ø 16 mm to Ø 32 mm

1 Cut perpendicularly the pipe with shears art.3812 **avoiding** to misshape it.

2 Gauge carefully the end of the pipe using the apposite calibrator-countersink art. 3813.

3 **Verify** the correct flare and **eliminate** the materials residues, those could **damage** the sealing O-Rings.

4 Insert the pipe into the connector till to touch the dielectrical washer, **make sure** that the tube is in the right position thanks to the bush's holes.

Avoid the use damaged fittings.

5 **Before pressing, check the functioning of the press tool art. 3810.**

Position the tongs TH art. 3811 in the **proper** way. The swelling ring of the bush has to be insert into the groove of the tongs.

6 Run up to the pressing contact of the two jaws of the pliers. **Make sure to periodically check the state of wear, the integrity and cleanliness of the pressing jaws.**

7 Pipe perfectly assembled to the connector

IMPORTANT: the sealing O-Rings have **NOT** to be lubricated

MOUNTING INSTRUCTIONS IDROPRESS CONNECTORS FROM Ø 40 mm to Ø 63 mm

1 Cut perpendicularly the pipe with shears art.3812 **avoiding** to misshape it.

2 Gauge carefully the end of the pipe using the apposite calibrator-countersink art. 3813.

3 **Verify** the correct flare and **eliminate** the materials residues, those could **damage** the sealing O-Rings.

4 Insert the pipe into the connector till to touch the bushing holder, **make sure** that the tube is in the right position thanks to the bush's holes.

Avoid the use damaged fittings.

5 **Before pressing, check the functioning of the press tool art. 3810.**

Position the tongs TH art. 3811 in the **proper** way. The swelling ring of the bush has to be insert into the groove of the tongs.

6 Run up to the pressing contact of the two jaws of the pliers. **Make sure to periodically check the state of wear, the integrity and cleanliness of the pressing jaws.**

7 Pipe perfectly assembled to the connector.

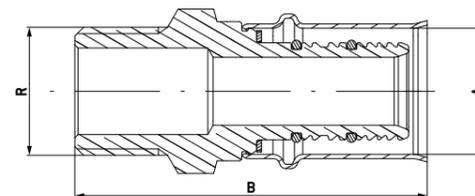

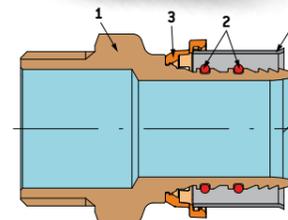

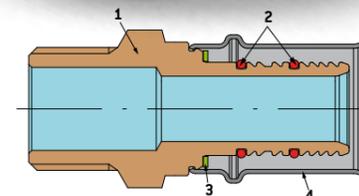

IMPORTANT: the sealing O-Rings have **NOT** to be lubricated

MALE STRAIGHT FITTING

PRESS FITTINGS FOR PEX-AL-PEX PIPES

ACS

PIPE'S DIAMETER AND THICKNESS:

| Ø | thickness |
|----|-----------|
| 16 | 2 |
| 18 | 2 |
| 20 | 2 |
| 26 | 3 |
| 32 | 3 |
| 40 | 3,5 |
| 50 | 4 |
| 63 | 4,5 |

- **Male** straight press fitting
- Maximum operating pressure: 10 bar
- Thread: EN 10226-1 (ex ISO 7/1)
- Temperature range: 0 - 95°C
- Sizes 40-50-63 are available only with plastic ring

This fitting is particularly indicated for distributing generally non-corrosive fluids that are compatible with the fitting materials.

Excellent fields of application are in plant engineering for plumbing and heating, and industry, especially for use in high- and low-temperature heating, air-conditioning and climate control systems, and in drinking water installations.

Seal is provided by two EPDM Perox O-rings, which are ideal for use with water and glycol solutions MAX 50%.

Pressing of the steel bushing using a power tool guarantees a perfect joint and excellent resistance to external stress.

The jaws used for pressing the fittings must have a TH profile.

COMPONENTS FROM 14 TO 32:

| POSN. | PART NAME | No. Pcs. | MATERIAL |
|-------|-----------|----------|---|

BONOMI HOME GAS SYSTEM

BONOMI HOME GAS system is manufactured according to UNI / TS 11344 "multilayer piping systems and metal-plastic fittings carrying gaseous fuels for internal systems", and UNI / TS 11343 "Plant gas supply for domestic use fed by network distribution of bins and fixed GPL storage tanks, piping systems made of multilayer metal-plastic-Design, installation and maintenance" and is composed of multilayer pipe PE-Xb/Al/PE-Xb yellow, press brass fittings identified by laser marking (GAS). Valves and all connections and terminals that make up the multi-layered metal system are placed in special metal boxes with lid unsealed for inspection in accordance with UNI CIG 7129-1.

BONOMI HOME GAS system can be used in air supply and distribution of gas at low pressure with the following applications:

- Type of Gas:
Natural Gas (2nd family)
GPL (3rd family)
- Maximum operating pressure (MOP):
0.5 bar (500 Mbar)
- Temperature range:
-20°C to + 70°C

General precautions of use

Instructions for transport, storage and installation of the system, can be downloaded directly on the website www.bonomiservice.com in the download section, or can be obtained directly from our sales department. Installer should always verify the integrity of the connection before the installation.

It is forbidden:

- the use of fittings visibly damaged or otherwise not well conserved;
- the use of tools and / or jaws / templates other than those set by the system manufacturer in the operating instructions and warnings;
- the use of tubes other than those specified by the system manufacturer in the operating instructions and warnings;
- interfere with or replace any seal.

In the transport operation is appropriate to place the tubes on smooth surfaces and avoid unnecessary protrusions. The tubes delivered on site (usually prepared in rolls or rods) should be stored in places away from sunlight and heat in order not to cause any damage to the tube surface. It is good practice to keep the tubes in the original packaging that contributes to the perfect preservation in order to protect the material from the solar UV radiation and avoid contact with sharp or abrasive bodies.

HOMEGAS PEX-AL-PEX PIPE

PEX-AL-PEX PIPES FOR GAS

The multi-layer tube HOME GAS represents a good alternative to metal pipes currently in use.

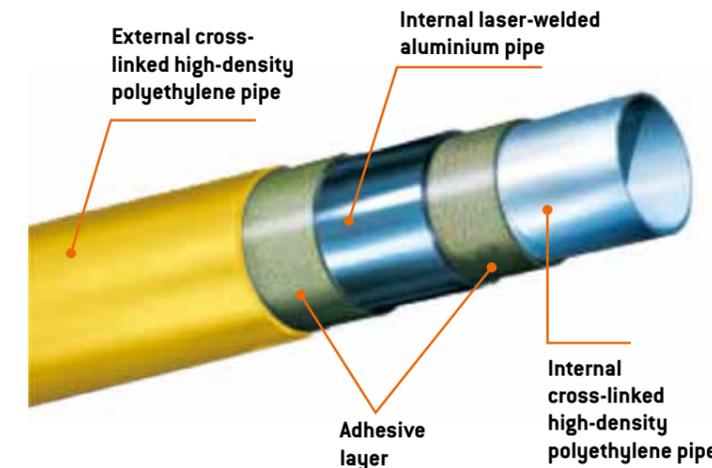

The main features can be summarized in the following points:

- Ease of installation due to the lightness and the absence of elastic memory given by the inner layer of aluminum.
- Resistance to corrosion given by the layers of reticled polyethylene and the use of dielectric barriers those preserve the product from chemical corrosion, electromagnetic and natural, avoiding the so-called "stack effect".
- Reduced losses. The inner surface in polyethylene has a surface finish that guarantees a considerable reduction of the losses typical of metal pipes.
- Impermeable to oxygen through the aluminum layer that prevents the passage of gases to prevent corrosion of the trigger circuits.
- Contained thermal expansion. The multilayer pipe reduces the thermal expansion of plastics due to its inner layer of aluminum, and maintains the same positive properties such as reduced pressure drop, ease of installation, in fact it is easy to bend, and even at low temperatures maintains the desired curvature.
- Possibility to have a pre-insulated multilayer pipe with special sheath certified GAS use.

4481...

HOMEGAS PEX-AL-PEX PIPE WITH GIRDLE

PEX-AL-PEX PIPES FOR GAS

HOMEGAS - PRESSING SYSTEM FOR CONNECTORS FROM Ø 16 mm to Ø 26 mm

The pressing system for connectors from Ø 16 to Ø 26 is done through the utilization of a tong TH model, that misshapes the bush in stainless steel AISI 304 solubilized determining the locking of the pipe to the connector.

PACKAGING 4480:

MOUNTING INSTRUCTIONS HOME GAS CONNECTORS FROM Ø 16 mm to Ø 26 mm

Cut perpendicularly the pipe with shears art.3812 **avoiding** to misshape it. **It is forbidden to use other pipes than those specified by the manufacturer of the system.**

Gauge carefully the end of the pipe using the apposite calibrator-countersink art. 3813.

Verify the correct flare and **eliminate** the materials residues, those could **damage** the sealing O-Rings.

Insert the pipe into the connector till to touch the dielectrical washer, **make sure** that the tube is in the right position thanks to the bush's holes. **Avoid the use damaged fittings.**

Before pressing, check the functioning of the press tool art. 3810.

Position the tongs TH art. 3811 in the **proper** way. The swelling ring of the bush has to be insert into the groove of the tongs.

Run up to the pressing contact of the two jaws of the pliers. **Make sure to periodically check the state of wear, the integrity and cleanliness of the pressing jaws.**

Pipe perfectly assembled to the connector

IMPORTANT: the sealing O-Rings have **NOT** to be lubricated

PRECAUTIONS

The joining process, materials, equipments and tools used should be those defined by the manufacturer of the system for multi-layer pipes, with directions and procedures laid down in the booklet of instructions and warnings, specifically done in support of the same. Fittings can be buried or placed subtrack on condition that they are respectively inserted into a suitable well, that can be inspected or a special box with not-tight lid, that can be inspected too. The points of junctions in correspondence of the fittings placed in the wells should be properly protected against corrosion, as required by EN 12954.

4401...

MALE STRAIGHT FITTING

HOME GAS PRESS FITTINGS FOR PEX-AL-PEX PIPES

- **Male** straight press fitting for gas
- Maximum operating pressure: MOP 0,5 BAR
- Thread: UNI EN 10226-1 (ex ISO 7/1)
- Temperature range: min. -20 °C - max +70 °C
- Manufactured according to UNI/TS11344

The fitting is particularly suitable for the distribution of natural gas and GPL at low pressure.

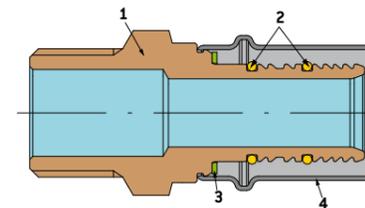

The fields of application can be the installation of new plants or replacing existing ones. Sealing is ensured by two O-rings in NBR with yellow Teflon, approved in accordance with UNI EN 682/06 and DVGW EN 549.

The pressing of the steel bush, done by electromechanical tools, ensures a perfect and indivisible grafting to the tube and also ensures a good resistance to external stresses.

The jaws to be used for the pressing of fittings are **TH** profile.

HOME GAS BUILT-IN BOX

HOME GAS PRESS FITTINGS
FOR PEX-AL-PEX PIPES

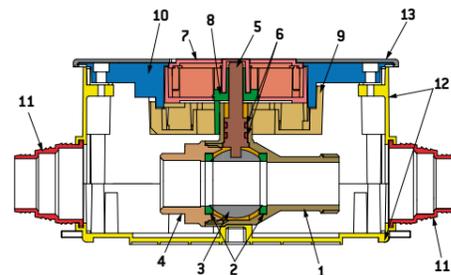

PAT. PENDING

- Built-in box for gas ball valve 1 outlet
- M/M 3/4" ball valve
- Thread male: ISO 228
- Pressure class: 0,5 bar (500 Mbar)
- Temperature range: min. -20 °C - max +70 °C

Bonomi **HOME GAS** can be installed in units with a single nominal heat input not greater than 35 kW.
The box can be inspected by removing the outer plate.
The top of the box is completely removable from the wall, and it is completely replaceable without damaging the tile surface.
DN20 full bore valve for a flow satisfying the needs.
The control of the valve's opening and closing state by the end user is visual, immediate, and infallible.
Innovative design according to modern canons, which require a non-invasive impact of plant equipments. Double safety in opening for a complete peace especially when children are present.
The shape of the maneuver organ not protruding from the wall doesn't attract attention, also shooting in the opening of security makes the task even more complicated, especially for a child.
Possibility to adjust the height of the control knob from 0-10mm kit without repair kit, from 10-40mm with a repair kit.
The repair kit is included in the box, it is not necessary to add additional costs in the event of incorrect installation.
Easy to install.

MOUNTING INSTRUCTIONS IDROPRESS CONNECTORS FROM Ø 16 mm to Ø 32 mm

1 Cut perpendicularly the pipe with shears art.3812 **avoiding** to misshape it.

2 Gauge carefully the end of the pipe using the apposite calibrator-countersink art. 3813.

3 **Verify** the correct flare and **eliminate** the materials residues, those could **damage** the sealing O-Rings.

4 Insert the nut and the olive into the external pipe, **make sure** that the connector enter to the pipe till to touch the dielectrical washer. **Avoid to use damaged fittings.**

5 Screw the union nut.

6 Tighten the nut with the key that fits properly, according to the torque specified below.

7 Pipe perfectly assembled to the connector.

IMPORTANT: the sealing O-Rings have **NOT** to be lubricated

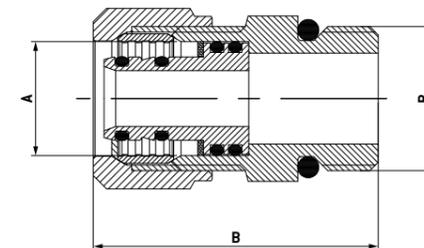

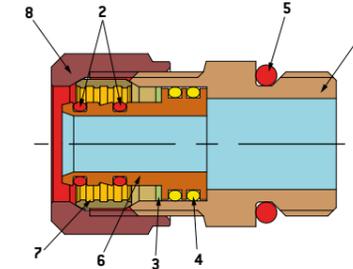

RECOMMENDED TORQUE:

| | CONNECTION Ø 16 | CONNECTION Ø 18 | CONNECTION Ø 20 | CONNECTION Ø 26 | CONNECTION Ø 32 |
|----|-----------------|-----------------|-----------------|-----------------|-----------------|
| Nm | 30 | 40 | 55 | 65 | 80 |

MALE STRAIGHT FITTING

COMPRESSION FITTINGS FOR PEX-AL-PEX PIPES

- **Male** straight compression fitting with O-Ring
- Maximum operating pressure: 10 bar
- Thread: ISO 228
- Temperature range: 0 - 95°C

This fitting is particularly indicated for distributing generally non-corrosive fluids that are compatible with the materials of the fitting. Excellent fields of application are in plant engineering for plumbing and heating, and industry, especially for use in high- and low-temperature heating, air-conditioning and climate control systems, and in drinking water installations.

Seal is provided by two EPDM Perox O-rings, which are ideal for use with water and glycol solutions max 50%.

The fitting is secured externally with a pipe clip to guarantee a perfect joint and excellent resistance to external stress.

COMPONENTS:

| POSN. | PART NAME | No. Pcs. | MATERIAL |

COMMUNICATION OF ANOMALIES AND AUTHORIZATION TO REJECT

In accordance with our quality system, in order to manage the abovementioned communications in an orderly and correct manner, we inform you that, as of date of receipt of this letter, all the claims you send will be examined only if they are written and they will have to contain the following reference data:

- PRODUCT'S TYPE
- INVOLVED QUANTITY
- DETAILED DESCRIPTION OF THE DECLARED ANOMALY
- REFERENCES TO THE TRANSPORT DOCUMENT / INVOICE
- WHERE INDICATED, THE NUMBER OF THE BATCH (marked on box)

The claimed goods have to be send back free of charges and well packed to IDROSANITARIA BONOMI SPA.

The refund or replacement of the claimed goods will be done only after verify of them done by our quality control dept.

If the manufacturing blemish will be ascertained the bookeeping dept. will provide for the credit or the replacement of the goods and the repayment of the expenses supported by the client.

GENERAL SALE'S CONDITIONS

Italian orders: minimum Euro 300,00, complete boxes

Export orders: minimum Euro 3.000,00, complete boxes

Characteristics, dimensions and weights indicate the standards of every item and can be subjected to variations without notice.

All the prices mentioned in this catalogue are in Euro.
